

Grow a Bean in a Bag

Science Experiment

Method

1. Wet the paper towel and put it inside the bag.
2. Put the bean on the paper towel and seal the bag.
3. Tape the bag to a sunny window.
4. The seed needs warmth to germinate and the sun should provide that. Plus the light will enable everyone to see the germinating seed better. It should take 3-5 days for the seed to germinate. Keep the paper towel moist, you may need to add a bit of water to it if it dries out. After 2 weeks, your bean can be planted in the soil or in a pot.

You will need:

- A ziplock bag
- Paper towels
- Water
- Bean seed
- Sticky tape

Science Experiment

Grow a Bean in a Bag

How long do you think it will take to grow?

Has it grown yet? What has changed?

What does it look like?

Are there any leaves yet?

Can you see the brown seed, the white sprouts and the green leaves?

When did we plant the seed?

Can you count how many days it has been growing for?
